

6. Marketing

6.1 Transport gratuit peste 500 de lei

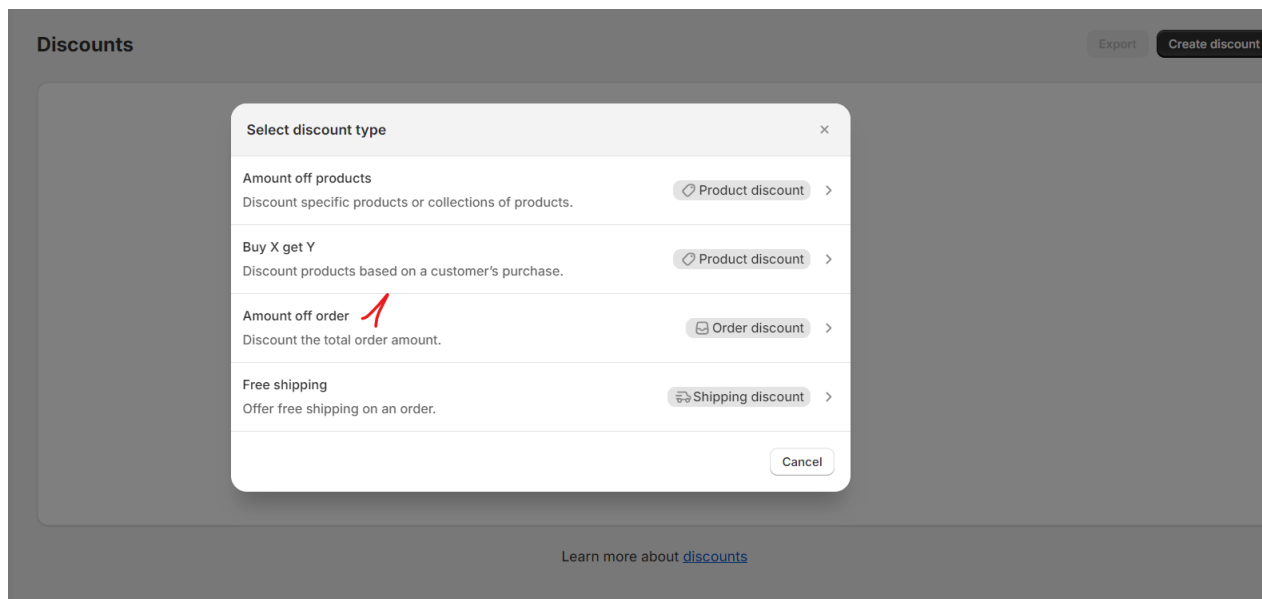

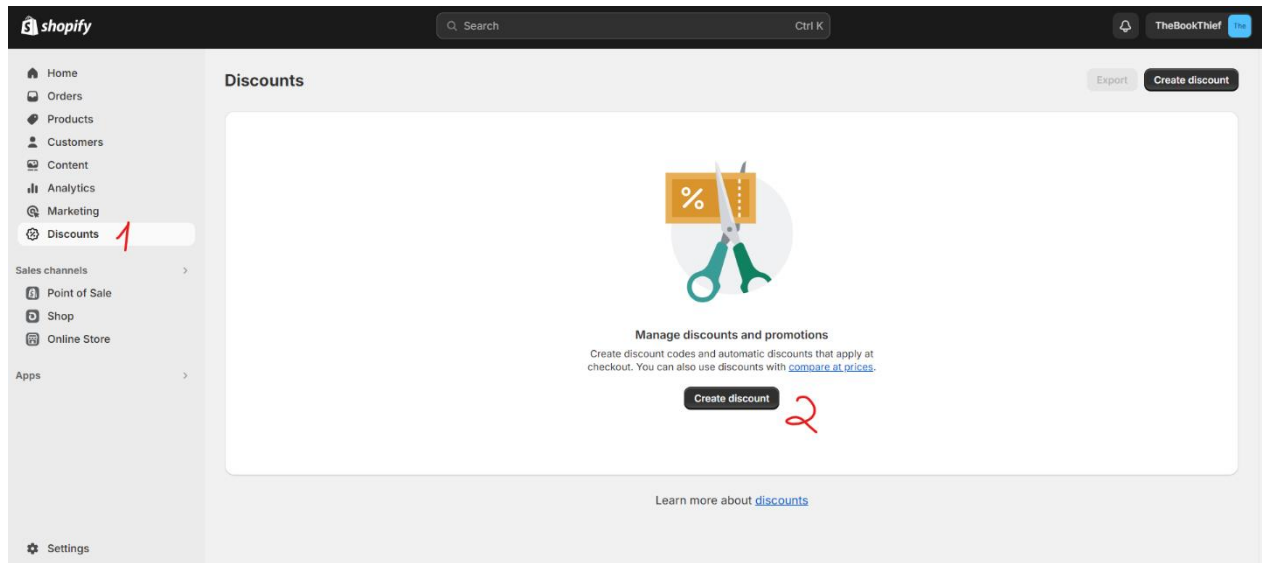

- Am adăugat și la livrarea prin curier și la livrarea prin poștă o regulă astfel încât, pentru comenzile mai mari de 500 de lei, transportul este gratuit.
- Pentru local delivery: am mers în “Settings”, “Shipping and delivery”, “Local delivery” și am folosit opțiunea “Add conditional pricing” cu setările corespunzătoare.
- Pentru livrarea prin curier: am mers în “Settings”, “Shipping and delivery”, opțiunea “Manage” din cadrul subsecțiunii “General shipping rates”. În editorul deschis, am mers la subsecțiunea “Shipping zones” și am adăugat regulile corespunzătoare.

6.2 Discount 5% pentru comenzi peste 2000 RON

- În cazul comenzilor de peste 2000 RON, am creat din “Discounts” un discount care se aplică automat.

6.4 Promoție pe o categorie de produse TVA 0%

- Pentru modificarea TVA-ului la 0% pentru o categorie de produse am mers la “Settings”, “Taxes and duties”, iar acolo am selectat “European Union”. În editorul nou deschis am mers la secțiunea “Product overrides” și am suprascris procentul pentru România, pe categoria “Religie” la 0%.

7. SEO

7.1 Configurare Meta Title, Meta Description și cuvinte cheie pentru categorii de produse

- Am mers în “Online store”, “Preferences” și am adăugat o descriere pentru “Homepage title” și “Homepage meta description”.
- În cazul cuvintelor cheie pentru categorii, am editat secțiunea “Search engine listing” a fiecărei categorii, adăugând o descriere generală a produselor din acea categorie.

7.3 Configurare robots.txt

- Fișierul robots.txt este de asemenea generat de site-urile administrate de Shopify prin adăugarea robots.txt la url-ul site-ului.

7.4 Integrare web analytics

- Shopify pune la dispoziție, în secțiunea “Analytics”, o serie de date pentru monitorizarea traficului și a comenzilor magazinului.

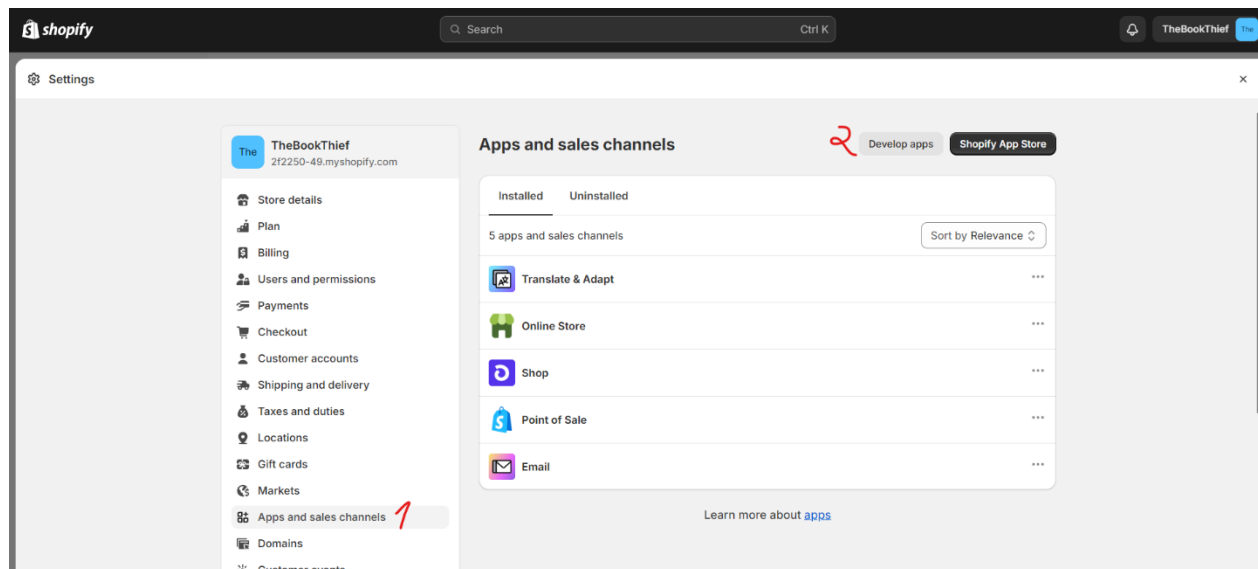

8. Raport comenzi/vânzări

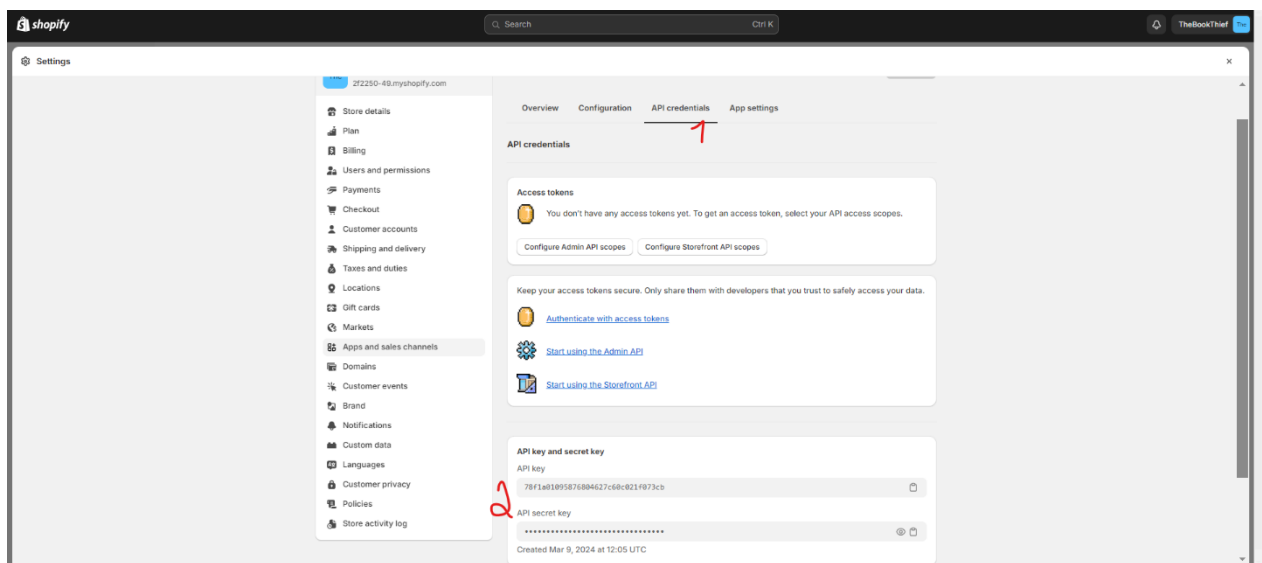

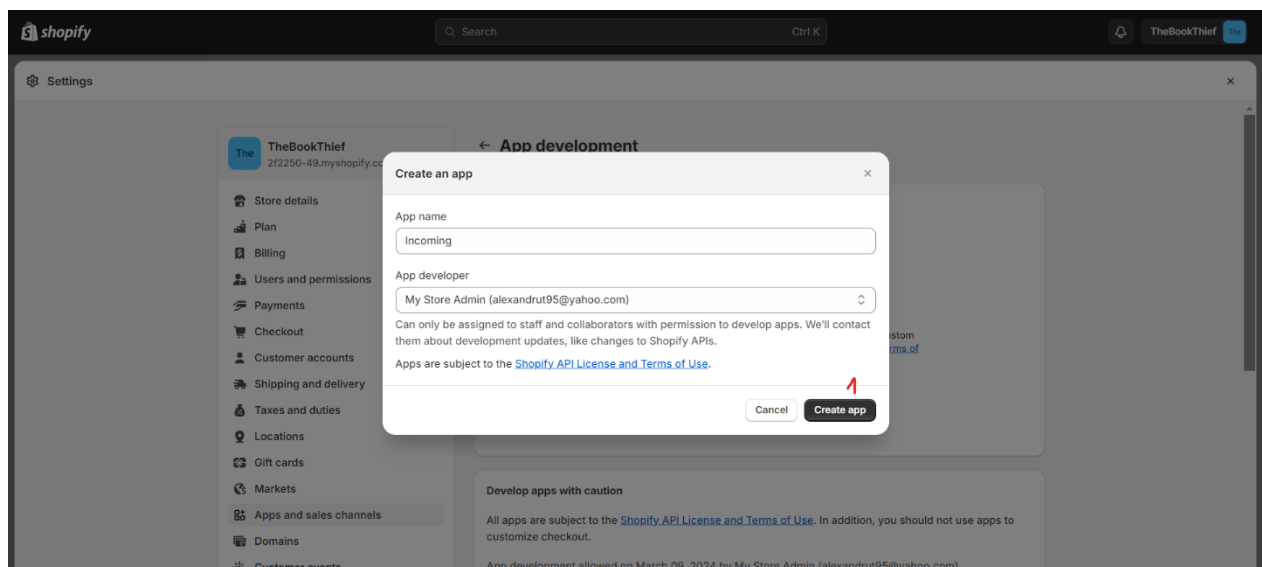

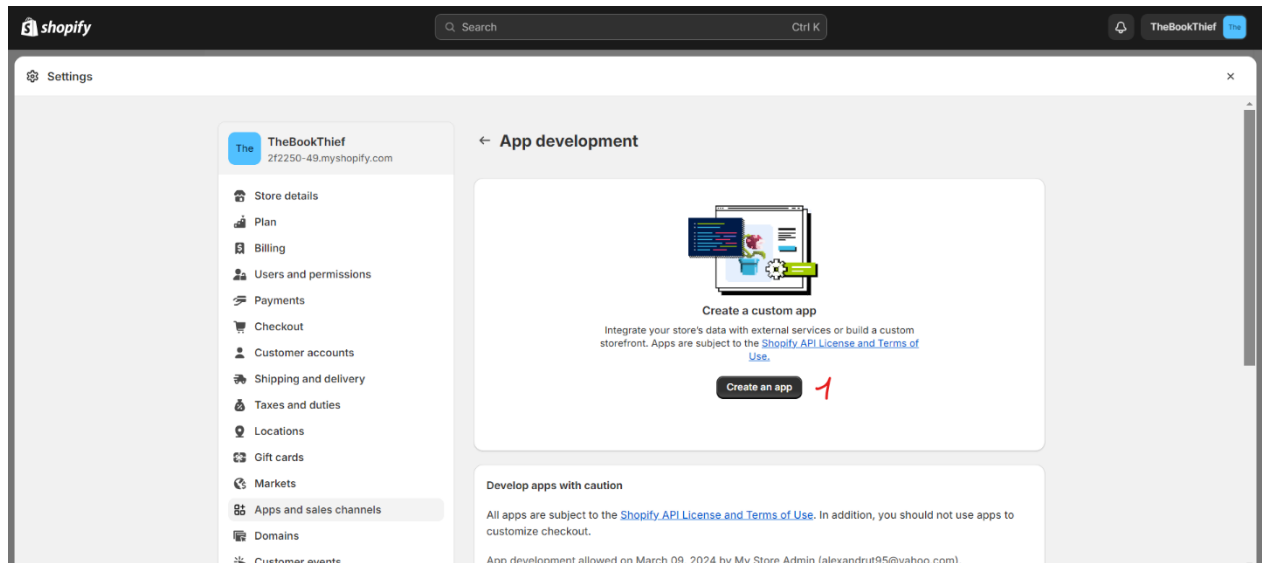

- În cadrul “Analytics”, secțiunea “Reports”, există mai multe rapoarte legate de vânzările efectuate de magazin.

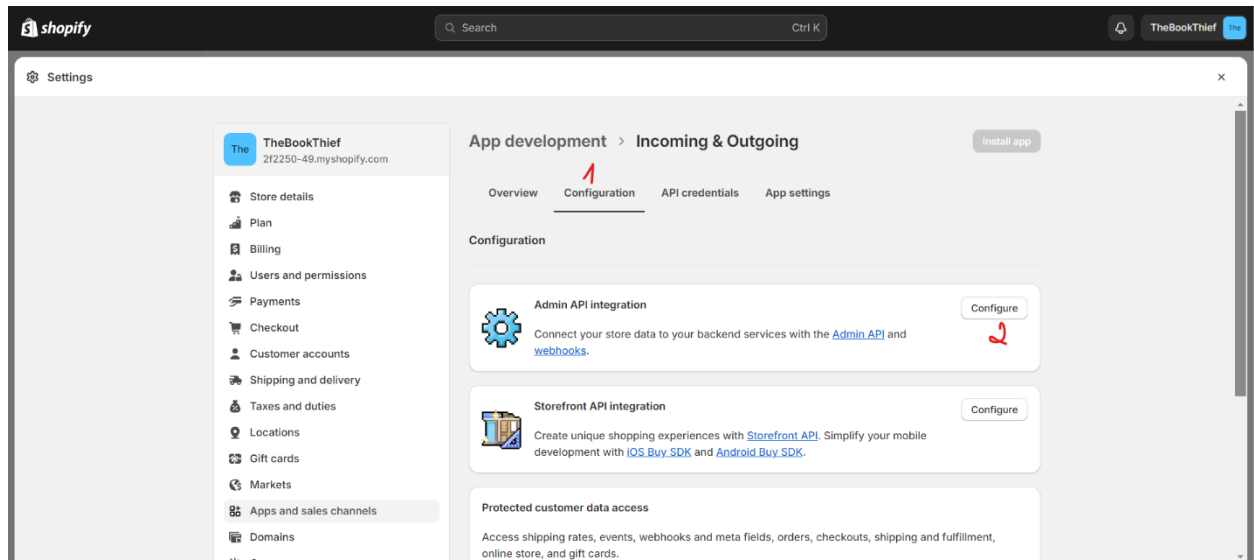

9. Integrare Machine 2 Machine

- Primul pas este crearea credențialelor API: „Apps and sales channels”, „Develop apps”, „Create an app” și am completat datele cerute. Putem vedea cheia API-ului în secțiunea „API credentials”.

- Am permis accesul la date, selectând căsuțele specific din “Admin API Integration”, din “Configuration”. După salvare, am instalat aplicația.
